Public Information Officer:

I support disposal of atomic waste at the Yucca Mountain Site so long as there are adequate provisions for monitoring ground water for potential health problems to local residents

Such monitoring provisions should provide for direct involvement of state and local governments in such a way to avoid any question of Federal cover-up.

Our Nation cannot afford to move this far along on such a project and then quit because of local public opposition. Give it a try.

Sincerely,

J.B. Jocks
