

MARY: Mary, M-A-R-Y.

4 I live here in Pahrump. I have moved here
5 recently from California. And I feel that the states
6 that make this product that we may be getting here,
7 they ought to maybe keep it in their own backyard where
8 they're producing it. We really have not benefited
9 that much from the nuclear, if we have an enormous
10 energy need all of a sudden, but it's such a small
11 amount percentage-wise that maybe it ought to stay and
12 we're not -- I don't know what good is going to come
13 from this.

14 How are we going to benefit from having this
15 stored here? And the highway, too, is not, I don't
16 think, adequate to handle the traffic. And if they're
17 thinking about moving some of this stuff on the
18 Interstate 15 from California over here, gee, there's a
19 lot of accidents happening all the time on 15 coming
20 over. And it will be quite a while before they get the
21 interstate from even Barstow to Vegas up to a few extra
22 lanes that they're thinking about adding to move this
23 stuff.

24 So we need a hospital and there are other

1 community, here in Pahrump can benefit from. I just

2 don't see any plus side from this nuclear waste stuff.

3 I just don't. That's it.

4 MS. SWEENEY: Thank you.
