Comment Text :

--> I not only oppose the Yucca Mountain project, I oppose the building of a railway corridor in Nevada. This project is not only dangerous to the residents of Las Vegas and the surrounding areas of Las Vegas and Yucca Mountain, it is hazardous to all of the communities throughout the United States that the waste will be trucked through or shipped via rail through. This project also endangers the water supply for the residents of Nevada, Arizona, and California. There have not been enough studies done to guarantee that our water supply will not be contaminated by nuclear waste leaks, etc. What mistifies me is that the DOE wants to ship the nuclear waste to a state that does not use nuclear power to generate electricity, etc. Further studies need to be done to find a better way to store the nuclear waste they want to ship to Nevada. Each state that uses nuclear power should be responsible for storing the waste in their own state.]
