Subject: Yucca Mountain and nuclear waste storage

LSN: Relevant - Not Privileged
User Filed as: Excl/AdminMgmt-14-4/QA:N/A

I [I can relate to the difficulty of your task, and appreciate an opportunity to try to influence you in what I believe you should stop the Yucca Mountain nuclear storage project, at least until the bigger issues are resolved. The benefits of collective storage, via mass transport in most every community in the US, heightens a problem rather than solves one.

It makes sense not to take further actions for nuclear radiation storage until we change the problem into a solution by no longer processing the material for energy and weapon systems. Processing it should be outlawed before we proceed with the best way for storage; otherwise, we are piling new problems onto old ones.. and everything gets worse.

In this record too, i would like to offer resources from my website at www.FlybyNews.com , which cover a wide range of issues, but certainly, also, focuses on turning around dangerous policies that can produce toxic pollution and destabilization for humanity.]
